Experience

Veygo

Full Stack Engineer

Jul 2021-Present

Mainly working in our core product team focusing on our React frontend, Django backend and AWS infrastructure. And heavily involved in and often leading on features for a technical perspective, whilst working closely with Product and Design.

Mentoring junior engineers both formally and more informally as part of working across different teams has been a great opportunity, helping me improve my own understanding of different aspects of work from Agile ways of working to more technical concepts.

Also involved in our move to microservices gaining experience with different frameworks such as Flask and Serverless whilst utilising ECS, Lambda and API Gateway in AWS.

Junior Full Stack Engineer

Jul 2019-Jul 2021

Started my professional journey here joining an incredible team of engineers mainly gaining experience with Javascript (React) and Python (Django). Got to work on a relatively new product within the business as part of an Agile Scrum team that was closely involved with different functions of the business.

Involved in the refresh of our mobile app that offered our main insurance products to both Android and iOS users (using React Native) also gained experience with different aspects of mobile development and release.

Skills

Javascript (React, React Native)
Typescript
Python (Django, Flask)
HTML and CSS
Infra (Terraform, Serverless)
CI/CD (CircleCI)
AWS

Education

Loughborough Uni

Sep 2016- Jul 2019

Computer Science - 2.1

Certification

AWS Cloud Practitioner
